

# D&L TILE SLAB DISCLAIMER FORM

JOB NUMBER / NAME \_\_\_\_\_ TODAY'S DATE \_\_\_\_\_

## YOUR TEMPLATE APPOINTMENT

- All countertops will need to be cleared of any obstructions in order to provide the most accurate measurements.
- Please have all cabinets securely installed in their permanent position and level. After the template, cabinets must not move.
- All appliances affecting measurements will need to be onsite. The sink must be on site. If D&L has to be up the sink, a **\$195 fee** will be added.
- If D&L shows up and the area is not ready a **\$195 fee** will be added in order to come back out to complete the template. **INITIAL** \_\_\_\_\_

## YOUR INSTALLATION APPOINTMENT

- All plumbing must be completely disconnected prior to install arrival. This includes all plumbing connected to sinks and all removal of everything from the countertops. D&L WILL NOT do any demo/prep work unless it is on our contract.
- We recommend at least 12 hours (minimum) after installation before any plumbing gets hooked up.
- Stone can be unpredictable, so delays are possible. We do our best to forecast difficult installs, but some delays will be beyond our control. **INITIAL** \_\_\_\_\_

## SEAMS

- D&L uses the best technology to make countertops as seamless as possible, but seams are not invisible. Seams will be seen and felt. Final seam location is at the discretion of D&L Tile. Our method in choosing seam locations is three parts: Do as few seams as possible, slab layout, and be able to transport, install, and preserve your stone as safely as possible. **INITIAL** \_\_\_\_\_

## NATURE OF STONE

- Stone countertops are beautiful, polished rocks. Natural variations in the stone occur and enhance the beauty.
- Fissures, pits, voids, dull spots, textural differences and thickness variations are not considered defects and will not warrant a remake or discount. If you chose remnants for the project, only remnants will be used for reworks. If material is chosen elsewhere, D&L recommends that supplier inform you about the material **INITIAL** \_\_\_\_\_

## FINISH WORK

- Occasionally, due to the scope of an install, 'finish work' may need to be done. D&L Tile does not perform finish work.
- Examples of finish work might include: Reinstalling trim that had to be removed to complete install, drywall work due to unavoidable damage from uninstalling and installing tops, any electrical work, cabinetry, and all plumbing. **INITIAL** \_\_\_\_\_

## SEALING

- D&L tile will do one coat of sealer. Sealers are not 100% "proof". If one coat is not enough, it is the homeowner's responsibility to add additional coats
